

THIS HOLIDAY HOME HAS A VERY SPECIAL TOILET

The vacuum toilet uses suction instead of flushing

This toilet — and all others in the area — are connected to one large vacuum system.

The vacuum system works like a giant vacuum cleaner.

It sucks the water out of the toilet and sends it on a journey through a network of pipes stretching several kilometers across the summer house area.

How to Use the Vacuum Toilet Correctly

However, a vacuum toilet is **not** a vacuum cleaner or a trash bin...

The entire system (including your neighbors' toilets) can clog if you flush anything other than pee, poo, and toilet paper.

Wet wipes, hair, sanitary pads, tampons, condoms, building materials, cotton swabs, diapers, underwear, and anything else must go in the trash — never in the toilet.

The Toilet Is Part of Something Much Bigger

If the toilet gets blocked — or if the toilet bowl is removed without turning off the valve at the roadside — the suction is interrupted. And when the suction stops, the whole system stops. That means no toilets will work in the surrounding summer houses either.

We all share the responsibility to keep the toilets working — not just in your house, but for your neighbors too.

Vacuum System Not Working?

If the whole street is affected – call Lolland Forsyning at +45 72 30 11 11.

If it's only your toilet – contact a plumber or your rental agency.
